Class Time: TBA

Room Number: TBA

TAs: TBA

Course description

The course provides an introduction into theories of business cycles. Major business cycle regularities observed in the data are our motivation and a starting point. Over the course, we discuss the ability of alternative business cycle models developed in the literature, from Real Business Cycle to New Keynesian, to explain main empirical facts about fluctuations.

Course requirements, grading, and attendance policies

The requirements include four problem sets (20% of final grade) and the final exam (80%). At least 70% lecture attendance is mandatory for getting a passing grade.

Course contents

I. Main empirical facts about business fluctuations

- Trend vs. business cycle: How are they separated in practice?
- Cyclical behavior of major economic time series
- Course overview

II. Real Business Cycle (RBC) theory

- Productivity shocks as a potential driving force of business cycles
- Exactly solvable version of the RBC model
- Solving a log-linearized RBC model in general case; impulse responses
- Empirical fit and limitations of RBC models

III. Imperfect information and real effects of money

- Evidence of non-neutrality of money in the short run
- Imperfect information about aggregate demand shocks as a potential cause of monetary non-neutrality
- Lucas imperfect information model
- Strategic complementarity and incomplete response to new information
- Empirical fit monetary business-cycle models with imperfect information

IV. New Keynesian Economics (NKE)

- Macro- and microeconomic evidence of the stickiness of goods prices and wages
- Menu cost as a cause of nominal rigidities
- Real rigidities and strategic complementarities
- Time-dependent vs. state-dependent sticky-price models
- New Keynesian Phillips Curve: derivation and empirical fit
- New Keynesian Model: open issues

V. Imperfections on goods and factor markets

- Market imperfections as potential sources of real rigidities
- Search frictions on the labor market and their implications
- Asymmetric information on financial markets and propagation of shocks

VI. Financial crisis 2007-2009 and the state of macro

- How has the recent crisis affected modern macro modeling and thinking?

Sample tasks for course evaluation

Problem 1. What are the implications of the following models for the effects of monetary policy on output and why? Address both anticipated and unanticipated changes in monetary policy. Be specific in your responses. The allocation of credit will depend on the quality of your discussion.

- i. The RBC model
- ii. The Lucas imperfect information model
- iii. The Fisher model with predetermined prices
- iv. The Taylor model with fixed prices
- v. The Caplin-Spulber Ss model

Problem 2. In what sense do you need both nominal and real rigidities to obtain monetary non-neutrality? What happens if you have one but not the other?

Problem 3. True, false, or uncertain? “One implication of the New Keynesian Phillips Curve is that disinflations are costless, i.e. do not lead to recessions.” Explain.

Past exams will be posted on my.nes.ru

Course materials

Required textbooks and materials

Romer, D. (2019), *Advanced Macroeconomics*, McGraw-Hill Irwin, 5th ed.; earlier editions are also acceptable – selected chapters

Blanchard, O.J., and S. Fischer (1989), *Lectures on Macroeconomics*, MIT Press – selected chapters

Additional materials

Empirical facts:

Stock, J., and M. Watson (1999), “Business Cycle Fluctuations in U.S. Macroeconomic Time Series”, Chapter 1, Volume 1A, *Handbook of Macroeconomics*, J. Taylor and M. Woodford eds, North Holland, pp. 3-64

Ng, S., and J.H. Wright (2013), “Facts and Challenges from the Great Recession for Forecasting and Economic Modeling,” *Journal of Economic Literature* 51(4), 1120-1154

Uribe, M., and S. Schmitt-Grohé, M. (2017), *Open Economy Macroeconomics*, Princeton University Press, chapter 1

Stock, J.H., and M.W. Watson (2001), “Vector Autoregressions,” *Journal of Economic Perspectives* 15(4), 101-115

Ramey, V.A. (2016), “Macroeconomic Shocks and Their Propagation,” in *Handbook of Macroeconomics*, Volume 2A, Elsevier B.V.
