

Economic Growth

Module 2, 2020/21

Course information

Instructor: Hosny Zoabi, E-mail: hzubi@nes.ru

Office Hours: TBA

Class Time: TBA

Room Number: TBA

TA: TBA

Course description

Economic growth is one of the most important phenomena in Economics. The fact that income levels in the United States and Western Europe are at least thirty times greater than income levels in much of sub-Saharan Africa is the result of economic growth. Therefore, the question of why some countries grow faster than others is a central one in economic thought. This question was raised in Adam Smith's *Inquiry into the Nature and Causes of the Wealth of Nations* (1776). Although, this question is not a modern issue, economists have been studying economic growth, intensively, since the second half of the twentieth century.

The purpose of this course is to examine and explain theories of economic growth, as well as the closely related empirical literature on development economics. The

first part of the course will cover some exogenous growth theories. We will examine the importance of physical capital, human capital and technological progress for economic growth. Then we move to micro founded growth theories in the second part of the course. The third part of the course will touch part of the endogenous growth theories focusing on poverty trap and long-run growth. The fourth part will examine some important empirical contributions to development economics.

Course requirements, grading, and attendance policies

The final grade will be based upon:

1. Home assignments - 20%.
2. A research project - 65%. The grade will depend on the following:
 - (a) Originality of the idea
 - (b) Its relation to the course
 - (c) Quality of the literature review
 - (d) Methodology: appropriateness and application of tools taught in class
 - (e) The overall story that the project tells.
3. Progress in your project - 10%. The details are provided in the file *Time table of your project*.
4. Attendance and participation in class - 5%.

“Class Participation” centers on two major components; attendance and preparedness. First, you need to attend class in order to reap the full benefits of the course. Second, you should be prepared for each class, having completed the home assignments, the required readings and being prepared to participate actively in the class.

Sample tasks for course evaluation

1. Suppose the production function for country A is

$$Q = Q(A, K, L) = AK^{3/4}L^{1/4}$$

- (a) Does this production function exhibit constant return return to scale?
- (b) Write the production function in per capita terms.

- (c) Suppose there is no technological progress, and both capital and labor grow at the constant rate n . What is the growth rate of output? What are the contributions of labor and capital to the growth?
2. Suppose that the saving rate of a country declines. Starting from steady state in the Solow Model, what will be the effect on the capital labor ratio, output per capita, and output growth? Distinguish between the short run and the long run.
